## [ISO/IEC TS 27028](#) — Information security, cybersecurity and privacy protection — **Guidance on ISO/IEC 27002 attributes [DRAFT]**

### Abstract

*"[ISO/IEC TS 27028] provides guidance on the use and development of attributes aligned to ISO/IEC 27002:2022."*

*[Source: ISO/IEC JTC 1/SC 27 Committee Doc 11 May 2025]*

### Introduction

[ISO/IEC 27002:2022](#) introduced a new structure for the information security controls, based around 'themes' and 'attributes', noting that organisations may prefer to use their own attributes as well or instead. ISO/IEC 27028 will explain how to do that, in practice, suggesting a variety of attributes with which to classify or characterise, select or design information security controls in various ways for various information security and business management purposes.

### Scope of the standard

The standard will expand upon the control attributes from [ISO/IEC 27002](#), providing practical guidance on how to use the specified attributes *and* how to develop additional attributes and attribute values where appropriate.

### Content of the standard

The standard may cover:

- *"Guidance on the development of customized sets of attributes and their usage;*
- *Attributes can be used to check that an organization's risk treatment plan(s) are tolerant of control failures;*
- *This concept can be used to confirm that controls cover the different aspects an organization has regarding its risks within scope of an ISMS."*

*[Source: design specification]*

### Status of the standard

Work started on this project in 2021.

It will be a **Technical Specification** rather than a full **International Standard** since the approach is innovative and not yet proven by experience.

**New** Structural and content comments on the **Draft International Standard**, plus revision of the title and scope,

[ISO/IEC 27036](#)[ISO/IEC 27037](#)[ISO/IEC 27038](#)[ISO/IEC 27039](#)[ISO/IEC 27040](#)[ISO/IEC 27041](#)[ISO/IEC 27042](#)[ISO/IEC 27043](#)[ISO/IEC 27045](#)[ISO/IEC 27046](#)[ISO/IEC 27050](#)[ISO/IEC 27070](#)[ISO/IEC 27071](#)[ISO/IEC 27090](#)[ISO/IEC 27091](#)[ISO/IEC 27099](#)[ISO/IEC TS 27100](#)[ISO/IEC 27102](#)[ISO/IEC TR 27103](#)[ISO/IEC TR 27109](#)[ISO/IEC TS 27110](#)[ISO/IEC TS 27115](#)[ISO/IEC 27116](#)[ISO/IEC 27400](#)[ISO/IEC 27402](#)[ISO/IEC 27403](#)[ISO/IEC 27404](#)[ISO/IEC TR 27550](#)[ISO/IEC 27551](#)[ISO/IEC 27553](#)[ISO/IEC 27554](#)[ISO/IEC 27555](#)[ISO/IEC 27556](#)[ISO/IEC 27557](#)[ISO/IEC 27559](#)[ISO/IEC TS 27560](#)

mean another DIS version is on the cards, necessitating an extension to the project timescale. The standard is unlikely to be published until the middle of 2026.

### Personal comments

There has been significant interest and support for the control attributes concept from ISO/IEC JTC 1/SC 27. When eventually published, I believe ISO/IEC TS 27028 will be a valuable contribution to the field, expanding on the value and utility of [ISO/IEC 27002](#).

Meanwhile, a [free guideline in the ISO27k Toolkit](#) explains how control attributes can be used creatively within an ISO27k ISMS, or indeed any other information risk-based framework that involves mitigating unacceptable risks using appropriate information security controls. Thinking about which attributes or characteristics of controls are relevant, plus the importance of the corresponding attribute values, helps round-off the analysis and so select appropriate controls.
